Soup to Nuts

Turning Disparate Data into Decision-Grade Business Intelligence

Vesper Annstas

3-25-2026

Objective

Save money, make money by establishing a trusted, scalable analytics foundation that empowers Finance, Marketing, and Sales to make **confident, data-informed decisions**.

90-Day Plan

Days 1 – 30

Understand & Map

- Inventory key data sources
- Identify redundant fields & ownership
- Review reports, SaveSearch, Excel workflows
- Map data flows & inconsistencies

Deliverables

- Current State Data Map
- Key Gaps & Risks

Days 30 – 60

Define & Align

- Define core KPIs (revenue, ROI, customer)
- Create metric dictionary
- Align definitions across teams
- Identify high-impact use cases

Deliverables

- KPI Framework (v1)
- Data Dictionary
- Reconciled Fields

Days 60 - 90

Build & Deliver

- Build integrated dataset (NetSuite + marketing)
- Reduce Excel dependency
- Deliver cross-functional dashboard
- Shop hosting & tooling stacks if needed

Deliverables

- Source of Truth Dataset
- Executive Dashboard (v1)
- Automation Opportunities Identified

Guiding Principles

- Single source of truth
- Standardized definitions
- Minimize Excel workflows
- Focus on high-impact questions
- Build for trust and usability

Expected Outcomes

- Trusted, consistent reporting
- Reduced manual effort
- Clear marketing ROI visibility
- Faster decision-making

Data Flow

Current

Target

Medallion Architecture

To provide traceable, standardized logic from source to target.

Bronze → Silver

Data Standardization & Cleaning

Step	Source System	Field	Transformation	Output Field	Notes
Raw Ingest	NetSuite	invoice_amount	None	invoice_amount_raw	Source of truth for revenue
Raw Ingest	HubSpot	deal_amount	None	deal_amount_raw	Sales-entered estimate
Filter	NetSuite	status	Keep Posted only	valid_transaction_flag	Exclude drafts
Currency	NetSuite	invoice_amount	1. Apply FX rate from NetSuite daily rate table 2. Standardize to USD	revenue_usd	FX rate applied
Cleaning	HubSpot	deal_amount	NULL if not closed-won	deal_amount_clean	Prevent double counting
Join	Both	email	Deterministic match on email; fallback to CRM ID mapping table	customer_id	Identity resolution
Logic	NetSuite	revenue_usd	SUM per transaction	revenue	Final revenue definition

Grain: One row per Invoice

Silver → Gold

Aggregation & KPI Mapping

Month	Channel	Product_Category	Revenue	(NEW) Prior_Month_Revenue	(NEW) Revenue_Growth_Pct
Jan 2026	Google Ads	Labels	1,620,686	—	—
Feb 2026	Google Ads	Labels	1,576,840	1,620,686	-2.70%
Mar 2026	Google Ads	Labels	1,427,963	1,576,840	-9.40%

Grain: One row per Month x Channel x Product Category

Hosting & Tooling

- **Storage / Compute:** Cloud data warehouse (e.g., Snowflake, Databricks, BigQuery)
- **Transformation:** SQL-based pipelines (e.g., dbt, scheduled jobs)
- **Ingestion:** APIs / connectors from CRM, ERP, and ad platforms
- **BI Layer:** Tableau / Power BI consuming Gold datasets

Data Governance Templates

To ensure accuracy & consistency across all reporting layers.

Data Validation

Field	Sample 1	Sample 2
Dataset / Table	NetSuite Transactions	HubSpot Contacts
Field / Metric	Revenue	Lead Count
Validation Type	Source-to-Target Reconciliation	Completeness Check
Validation Rule	Sum of Revenue in BI = Sum of Invoice Amount in NetSuite	Count of leads in BI = count in HubSpot
Expected Result	Values match within acceptable tolerance ($\pm 1\%$)	No missing records
Frequency	Daily	Daily
Owner	Analytics / Finance	Marketing Ops
Status	Pass / Fail	Pass / Fail
Notes / Actions	Trigger email alert to DL if variance exceeds threshold	Check ingestion pipeline if mismatch occurs

Field Reconciliation

Field	Sample 1	Sample 2
Business Concept	Revenue	Revenue
Source System	NetSuite	HubSpot
Field Name	Invoice Amount	Deal Amount
Definition (as-is)	Total invoiced sales	Estimated deal value
Logic / Calculation	Sum of invoices	Manual entry by sales
Example Value	\$100,000	\$120,000
Variance vs Others	—	20%
Data Quality Issues	None	Not actual revenue
Recommended Source	Yes	No
Reasoning	Matches finance reporting	Not realized revenue
Owner	Finance	Sales

KPI Definitions

Field	Sample 1	Sample 2
KPI Name	ROAS	CAC
Business Definition	Revenue generated per dollar of ad spend	Cost to acquire a new customer
Data Source	NetSuite + Google Ads	Google Ads + HubSpot + NetSuite
Calculation Logic	Attributed Revenue / Ad Spend	Total Ad Spend / # of New Customers
Filters / Rules	Attribution based on campaign → customer linkage	Define “new customer” consistently
Owner	Marketing	Marketing

Dashboard Concepts

Executive Performance

“Are we profitable?”

“What’s driving results?”

“Where should we take action?”

Executive Dashboard for Yearly Business Revenue Growth

This slide shows various graphs of executive dashboard, that covers the percentage of revenue growth, client's acquisition, number of new business, average order value and new vs recurring business.

This graph/chart is linked to excel, and changes automatically based on data. Just left click on it and select "edit data".

Example from slideteam.net

Marketing ROI & Performance

“Which channels drive ROI?”

“Where are we wasting spend?”

“Which trends are emerging in performance?”
